

Literature: GMO Sustainability in South Africa

The sustainability of a GMO refers to its (i) safety and (ii) viability. Safety comprises the safety of a GMO to human and animal health (i.e. food and feed safety - FF) and its safety to the environment (i.e. environmental safety - E). The viability of a GMO refers to the socio-political and economic aspects (SP-E). The list of references below is pertinent to GMO sustainability in South Africa, and is by no means exhaustive.

For more information on sustainability of GMOs visit <http://biosafety.org.za/information/dig-deeper/sustainable-gm-product-development/sustainable-gm-innovation>.
